

EnterpriseOps-Agent

A Multi-Agent System for Enterprise
Decision Intelligence

Participant: MADHU

Problem Statement

- Fragmented enterprise data across disparate systems and silos.
- Manual, time-consuming data collection and analysis by teams.
- High latency in generating actionable insights for executives.
- Reactive decision-making due to delayed and incomplete information.
- Lack of a unified, real-time view of operational risks and opportunities.
- Inefficient resource allocation based on outdated or fragmented charts.

Solution to Existing Problem

From Raw Data to Decisive Action

Decision Acceleration

AI-generated insights instantly available for executives, executing concurrent operations at the speed of compute.

Actionable Intelligence

Automated cross-functional analysis via specialized agents natively interacting with structured enterprise data.

Operational Efficiency

Eliminates manual reporting pipelines and proactively flags operational business risks before they escalate.

The Analytics Evolution: Beyond the Dashboard

Traditional BI	EnterpriseOps MAS
Interface: Static, fragmented dashboards	Interface: Conversational, intent-driven UI
Analysis: Manual data pulling and slicing	Analysis: Autonomous Multi-Agent collaboration
Output: Disconnected charts	Output: Unified Executive Action Plans
Speed: High latency, reactive	Speed: Real-time, scalable, proactive execution

Unlike traditional BI dashboards or single AI assistants, EnterpriseOps-Agent functions as a digital executive team.

A Hierarchical Multi-Agent Architecture Features of EnterpriseOps

Built on Google ADK (GEAP) and powered by Gemini 3.5 Flash.

The Intelligence Pipeline: Lifecycle of a Query

Conveyor Belt of Intelligence

Rich Business Context: Integrating structured CSV data directly with Knowledge Base PDFs for complete situational awareness.

Secure, Real-Time Enterprise Data Integration

Agents do not rely on hallucinations; they securely retrieve and reason over actual business data using the BigQuery MCP Server.

Key Advantage

Zero direct database exposure. Strict, tool-based SQL execution ensures complete enterprise data governance.

Production-Ready at the Edge of Compute

Pillar 1: Google Agent Runtime

Managed deployment platform providing seamless autoscaling, session observability, and production-ready AI agent execution.

Pillar 2: NVIDIA GPU-Accelerated Infrastructure

High-performance compute deployed on Google Cloud, guaranteeing scalable, low-latency execution for heavy, concurrent Multi-Agent workloads.

Built on Absolute Trust: Google Model Armor

PII Protection

Real-time detection and redaction of sensitive enterprise information.

Threat Mitigation

Active defense against advanced prompt injection attacks.

Enterprise Compliance

Ensures all agent reasoning and data retrieval adheres to strict corporate security standards.

Real-World Impact: Proactive Risk Detection

Generated in seconds—eliminating hours of manual data analysis.

Which projects require executive escalation?

Operational Findings: The following projects require executive escalation due to their status being 'At Risk' or 'Delayed', or having a high risk score (above 70):

- P003 – Orion: Status: At Risk, Risk Score: 71
- P008 – Pulse: Status: At Risk, Risk Score: 69
- P001 – Atlas: Status: Delayed, Risk Score: 82
- P005 – Titan: Status: Delayed, Risk Score: 78
- P009 – Vertex: Status: Delayed, Risk Score: 88

EnterpriseOps-Agent

AI-Powered Enterprise Decision Intelligence using Multi-Agent System

Autonomous. Intelligent. Scalable. Secure.

NVIDIA

Powered by Google Cloud & NVIDIA Accelerated Infrastructure

Up to 10X
Higher Throughput*

Handle more requests concurrently

Up to 10X Lower Latency*

Faster responses for real-time
decision making

*Performance improvement (NVIDIA GPU vs CPU-only infrastructure)

SYSTEM ARCHITECTURE

TECH STACK (GCP SERVICES)

Google ADK (GEAP)

Gemini 3.5 Flash

BigQuery

BigQuery MCP

Google Agent Runtime

Vertex AI

IAM

Model Armor

Monitoring & Logging

Python 3.11

LANGUAGE

Python 3.11

★ KEY HIGHLIGHTS

Multi-Agent System (MAS)

Autonomous Planning & Delegation

Tool-Augmented AI (BigQuery MCP)

Secure & Compliant (Model Armor)

No Cloud Storage (All in BigQuery)

Scalable & Production Ready (Agent Runtime on NVIDIA GPUs)

Executive-Ready Insights

The EnterpriseOps Tech Stack

Infrastructure	NVIDIA GPU-Accelerated Google Cloud, Google Agent Runtime
Reasoning & Orchestration	Google ADK (GEAP), Gemini 3.5 Flash
Data & Integration	Google BigQuery, BigQuery MCP Toolbox
Security & Application	Google Model Armor, Python

Deploy Your Digital Executive Team.

Thank you. EnterpriseOps-Agent is open-source and ready for production scaling.
